

# CALCIMAX<sup>®</sup> RTU

Reg. No. V32091 (Act 36/1947)

Vitamin & mineral supplement for ruminants, game, swine, horses and ostriches

## DATA SHEET

## INDICATIONS

CALCIMAX RTU is a ready to use combination of calcium, magnesium and vitamin D in an energy-based combination of propylene glycol and monosaccharides to assist in calcium, magnesium and energy deficits after calving, lambing, farrowing and foaling.

CALCIMAX RTU is a unique blend of fast-, medium- and slow-release calcium sources.

## BENEFITS

- Unique, cost-effective product for the prevention of milk fever as well as consequences such as ketosis and energy imbalance.
- Easy administration in water, feed or as an oral dose.
- CALCIMAX<sup>®</sup> RTU also contains magnesium, vitamin D<sub>3</sub> and propylene glycol for accelerated energy release.

# CALCIMAX<sup>®</sup> RTU

Reg. No. V32091 (Act 36/1947)

Vitamin & mineral supplement for ruminants, game, horses and ostriches

## COMPOSITION

1 litre RTU solution contains	
Calcium	80 g
Magnesium	7 g
Propylene glycol & monosaccharides	250 g
Vitamin D <sub>3</sub>	20 000 IU

## INGREDIENTS

Propylene glycol; monosaccharides; calcium propionate; calcium chloride; calcium carbonate; fat soluble vitamin D; magnesium fulvic acid and deionised water

## DIRECTIONS FOR USE

- Use CALCIMAX RTU 1 – 4 hours post calving, lambing, farrowing or foaling.
- Repeat after 12 hours and again 12 hours later if still required.
- In real extreme dehydration conditions, add water to the CALCIMAX RTU solution 10 fold the CALCIMAX RTU volume. For example, 500 ml dosage could be supplemented with 5 L of water for extremely dehydrated animals and administered slowly, over a period of time determined by the size and medical condition of the animal.

## Mixing into the feed

The recommended allowance can also be mixed into the feed or dissolved in drinking water as a “once off” application where the CALCIMAX RTU feed or water is the only supply until finished. Repeat application after 12 hours. Note that this means of application will yield slower support.

## WARNING WITH ORAL APPLICATION

Administer slowly to avoid overflow into the windpipe and lungs. Ensure that the animal is able to swallow before administration, if not, place a stomach tube.

## RECOMMENDED ORAL APPLICATION

	Body mass	1 ml / kg mass
<b>Dairy &amp; beef cattle</b>	400 – 600 kg	400 - 600 ml
<b>Ewes</b>	50 – 65 kg	50 - 65 ml
<b>Mares</b>	400 – 600 kg	400 - 600 ml
<b>Sows</b>	90 – 120 kg	90 - 120 ml

## STORAGE CONDITIONS

Keep out of reach of children or uninformed persons. Store in a cool, dry place, but do not refrigerate.
